

**INSTALLATION GUIDE**  
**CASEMATE®**

**80 JOULES PROTECTION CASE**

① **CASEMATE®** is installed separately from emergency unit or fitting, even if already operating.

② Adjust the base so the emergency unit is correctly placed in the center.

③ We recommend the use of specific plugs and screws according to wall type.

④ Flexible reflector must be turned so the printed instructions are not visible when installation is completed.

**IMPORTANT:** Reflector flaps must be placed backwards the emergency units, so luminous output will not be reduced.

⑤ Close polycarbonate diffuser and tighten the vandal proof screws.

*The **CASEMATE®** is designed for most common emergency fittings. Depending on your local market, you may or not may use Casemate with emergency and lighting fittings of your market.*
